EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Att. Liu on September 1, 2004.

The application has been amended as follows:

In the claims

In claim 16, line 1, replace "phase" with -- oscillator --.

In claim 20, line 1, replace "subsystem" with -- system --; replace "16" with -- 15 -- ; and replace "phase" with -- oscillator --.

In claim 21, line 1, replace "subsystem" with -- system --.

In claim 22, line 1, replace subsystem" with -- system --.

Reasons for allowance

The following is an examiner's statement of reasons for allowance:

The present invention is drawn to a pulse-width controller utilizing a first pulse generator, a second pulse generator, a clock signal, control signal generator logic, differential logic, an oscillator and delay line circuitry ... or first – third means and control means recited in claims 1-24. None of the prior art disclosed or suggested to show the particular structure and/or the particular operation recited in these claims namely: "differential logic coupled to receive the clock signal ... responsive to the second

Art Unit: 2816

adjusted pulse-width signal" (line 13 - last line) in combination of "the first pulse generator", "the second pulse generator" and "the control signal generator logic" as recited in claim 1; "first differential logic coupled to receive the clock signal ... responsive to the second adjusted pulse-width signal" (line 16 – 34) in combination with "the first pulse generator", "the second pulse generator", "the control signal generator logic" and "the oscillator" as recited in claim 12; "third means" in combination with "the first means", "the second means" and "the control means" as recited in claim 23; the combination of all the method steps as recited in claim 24.

The prior art references submitted by the applicant on IDS forms received on 03/17/04 and 06/14/04 were reviewed and considered. These references appear to be the best references with respect to the claimed invention and closely matched most of the references found during the examiner's searches. However, as noted above, "the differential logic" in combination with "the first pulse generator", "the second pulse generator" and "the control signal generator logic", or the combination of "the first – third means and the control means" is not disclosed. Therefore, the claims are patentably distinct over all these prior art references of record.

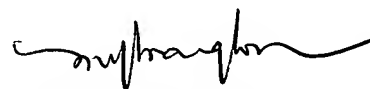

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
